Technical Specifications

- **Product Installation:** Windows 7 and later (OR) 2008R2 and later
- **Deployment Model:** On-prem, VMs and on private-cloud (AWS/Azure)
- **Web-interface:** IE, Chrome, Safari, Firefox, Edge
- **Back-end Database:** PostgreSQL (bundled) / MS SQL server
- **Authentication:** Active Directory, RADIUS, SAML, native
- **MFA:** OTP through email, TOTP, and any RADIUS-compliant authentication mechanism
- **Data Encryption:** AES-256
- **Data Transmission:** SSL over HTTPS
- **Discovery:** Agentless
- **Remote Connections:** RDP, SSH, SQL
- **Password Resets:** Agentless
- **Privileged Accounts Management Support:** Servers, databases, network devices, VMs, cloud and on-prem applications.
- **Integrations:** Active Directory, SIEM solutions, ticketing systems, enterprise SSO solutions.
- **High Availability:** Redundant servers pointing to the same database. MS SQL clusters.

Product Highlights

Discover and Consolidate Accounts

Discover privileged accounts on Windows, Linux, and Mac systems, devices, databases and applications.

Automated Password Resets

Automatically randomize passwords of administrative, service and application accounts periodically.

Windows Accounts Management

Manage Windows domain, service, and local accounts. Manage the dependencies of service accounts.

Active Directory Integration

Integrate with Active Directory for user authentication, onboarding and automatic offboarding.

Audit and Compliance Reporting

Track which individual IT staff has access to which account. Monitor and report privileged access activity.

Manage Shared Admin Passwords

Share admin and firecall accounts with complete control and auditing. Link access, actions to individuals.

Approval Workflows

Enforce password request-release approvals for IT staff. Automate reset after time-limited access.

Launch Remote Sessions

Launch secure, remote sessions automatically without copying and pasting the login credentials.

Manage Application Passwords

Eliminate hard-coded passwords embedded in configuration files, scripts, and code through APIs.

Robust Offline Access

Offline provision to securely access passwords from remote locations or client-sites.

Thoroughly Validated By Third-Party Security Experts

"The overall security posture of the product is very good, and above the industry standard."
