- **High Availability:** Redundant servers pointing to the same database. MS SQL clusters.

## Product Highlights

### Centrally Store

Securely store all logins, passwords, access keys, documents and other sensitive data in the central vault.

### Collaborate and Share With Team

Define ownership for accounts and let owners share passwords with team while retaining control.

### Integrate With Active Directory

Integrate with Active Directory for user authentication, onboarding and automatic offboarding.

### Track Activities With Logs, Reports

Maintain complete trail of password activity across the organization. Generate access, usage reports.

### Autofill Credentials

Autofill credentials on websites using browser extensions. Autosave new credentials to the Vault.

### Get Organized

Organize passwords, users as folders and groups reflecting organizational hierarchy and assign access rights.

### Control Access to IT

Establish controls on who can access what passwords. Provision and deprovision access seamlessly.

### Launch Remote Sessions

Launch secure, remote sessions automatically without copying and pasting the login credentials.

### Expiration Alerts

Set maximum age for passwords and send expiration alerts reminding users to change their passwords.

### Mobile Access

Access your passwords from mobile devices through Securden native apps.

## Thoroughly Validated By Third-Party Security Experts

"The overall security posture of the product is very good, and above the industry standard."

-- Experts from Agile Infosec, London.
