Technical Specifications

- **Product Installation:** Windows 7 and later (OR) 2008R2 and later
- **Deployment Model:** On-prem, VMs and on private-cloud (AWS/Azure)
- **Web-interface:** IE, Chrome, Safari, Firefox, Edge
- **Back-end Database:** PostgreSQL (bundled) / MS SQL server
- **Authentication:** Active Directory, RADIUS, SAML, native
- **MFA:** OTP through email, TOTP, and any RADIUS-compliant authentication mechanism
- **Data Encryption:** AES-256
- **Data Transmission:** SSL over HTTPS
- **Discovery, Admin Rights Removal:** Agentless
- **Privilege Management, Application Control, Command Filtering and Temporary Admin Access:** Through a light-weight agent
- **Integrations:** Active Directory, SIEM solutions, ticketing systems, enterprise SSO solutions.
- **High Availability:** Redundant servers pointing to the same database. MS SQL clusters.

Product Highlights

Local Admin Analysis

Identify and track the list of users and groups that are part of the local admin group on computers in the domain.

Discover Applications

Automatically discover and identify the applications that require elevated privileges across the enterprise.

Elevate Applications On-Demand

Create policies to seamlessly elevate applications for standard users. Elevate applications, not users.

Remove Admin Privilege

Remove local admin rights from users on Windows endpoints. Enforce least privilege without impacting operational efficiency.

Control Applications

Whitelist trusted applications and prevent unapproved applications. Granularly control which applications are allowed to run.

Temporary Admin Rights

Workflow approvals to grant full admin rights for a time-limited, temporary usage. Automatically revoke access, audit activity.

Recommended by a Windows Expert

Mike Kanakos,
Seasoned Windows IT Professional
and Active Directory Expert

Thoroughly Validated By Third-Party Security Experts

"The overall security posture of the product is very good, and above the industry standard."
