

# Eliminate local admin privileges without impacting productivity

## Securden Windows Privilege Manager

Remove local admin rights on Windows servers and endpoints. Seamlessly elevate applications for standard users. Grant temporary admin rights on-demand. Control application usage by employees through whitelisting and blacklisting.

Enforce Least Privilege

Control Applications

Prevent Malware Propagation

# Seamless Privilege Management for Workstations

Securden Windows Privilege Manager eliminates excess privileges from endpoints, helps enforce policy-based application controls, allows Just-in-Time elevation, prevents malware propagation, and helps comply with IT regulations.

- **Inventory of Devices**

Discover and create an inventory of workstations and servers in your organization. Decide which devices require least privilege enforcement.

- **Applications Discovery**

Automatically discover the applications that require administrator privileges across the enterprise. Consolidate and centrally track them.

- **Policy-based Management**

Centrally enforce least privileges through granular access control policies for specific users or groups on specific workstations.

- **Remove Admin Privilege**

Remove local administrator rights from users on Windows workstations. Enforce least privilege without impacting operational efficiency.

- **Local Admin Analysis**

Identify and track the list of users and groups that are part of the local admin group on computers in the domain.

- **Temporary Administrator Access**

Grant time-limited, fully controlled, and comprehensively audited temporary administrator access to standard users on need basis. Automatically revoke access.

- **Granular Application Control**

Define and control which applications can be run by standard users. Whitelist trusted applications and prevent unapproved and malicious applications.

- **Offline Scenarios**

Ensure least privilege and application controls even when the endpoint is offline or away from the network or when users are working from home.

- **Elevate Applications On-Demand**

Empower standard users to seamlessly run approved applications (that would normally require admin rights) whenever needed. Elevate applications, not users.

- **Continuous Monitoring**

Continuously monitor who all have administrator privileges. Detect if new local administrator accounts are added.

## View Securden Windows Privilege Manager Demo Video

You can view a video recording of Securden Windows Privilege Manager demo. The demo walks you through the important features demonstrating how you can eliminate local administrator rights on Windows endpoints and servers, seamlessly elevate applications for standard users, enforce least privileges and control application usage by employees.
