Securden Endpoint Privilege Manager

Instructions for upgrading from versions 8.8.3 - 10.8.5

If you are using version 8.8.3 - 10.8.5, please follow the steps mentioned here to upgrade Securden Endpoint Privilege Manager to the latest version.

Step 1: Take a Backup of the Endpoint Privilege Manager

✦ Stop **"Securden WPM Service"** from **services.msc** in all the Secondary Servers.

✦ Stop **"Securden WPM Service"** from **services.msc** in the Primary Server.

✦ Take a backup copy of the entire Securden installation folder and store it in a secure location.

✦ If you are using MSSQL as the backend database, connect to SQL Management Studio and take a backup of the Securden database. If something goes wrong with the upgrade, you will be able to restore it using the backup.

Step 2: Download the Upgrade Manager

✦ Download the upgrade manager application from here: Securden-Python-Upgrade-Manager

✦ Paste the downloaded file in the bin folder of your Securden installation directory <Installation-directory>\Windows_Privilege_Manager\bin

Step 3: Download and Install the Upgrade Pack

You may download the **upgrade pack (.sum)** available from the <u>release notes</u> page. Once the sum file is downloaded, follow the steps below to upgrade your Securden instance.

- Go to **Admin >> Maintenance & Upgrades >> Product Upgrades** of the primary server's web interface to verify whether the primary instance is ready for upgrading.

- Once verified, you can follow the upgrade instructions on the web interface.

> **Important**
>
> - Instead of executing the file, **SecurdenUpgradeManager.exe** as mentioned in the web interface, execute **"SecurdenPythonUpgradeManager.exe"**. You may follow the other steps as mentioned in the interface.
